Second Quarter 1994

Introduction

We wish to express our thanks to all the employers who supplied the necessary occupational employment and wage data by responding to the Occupational Employment Statistics (OES) program survey. This OES program is a federal/state cooperative effort between the Maine Department of Labor's Division of Labor Market Information Services, and the U.S. Department of Labor's Bureau of Labor Statistics, to determine, by industry and occupation, employment and wage levels in the state as well as the nation. This type of information has many uses, both public and private. Employers use this data to compare their staffing to their industry. Vocational advisors in high schools, trade and vocational schools, universities, and government employment offices use this data to help place current job seekers and to advise those of the future. This data helps determine what skills would be needed to attract a new firm or industry into an area. The information also gives insight into what jobs might be lost should an industry experience massive reductions in employment. Also, this data forms the basis of the state's occupational employment projections program. The output of this program helps job training specialists and planners from economic development agencies to plan for the future.

Each year approximately one-third of the State's industries are surveyed. Thus the entire economy will be covered every three years. Using this cycle, employers are asked to provide occupational data only once every three years. This ensures that no part of the data base is over three years old, and that significant changes in the staffing patterns of industries can be identified early, as the trend develops.

Only data which meet the following criteria are published in the accompanying tables: an occupational employment estimate must be ten or greater and have a relative error less than 51 percent or 36 percent depending if the industry's response rate was 70 percent or greater, or between 60 and 70 percent, respectively. Data was screened to ensure that the identity of sample firms may not be derived from the published data. Data for occupations that do not meet publication or confidentiality criteria are combined with the appropriate "all other" category.

The industry classification used in the OES program and in this publication are defined in the 1987 edition of the *Standard Industrial Classification (SIC) Manual*, prepared by the Executive Office of the President, Office of Management and Budget, Statistical Policy Division.

The wage data collected through the OES program is collected by wage **ranges** rather than by actual wages. However, the U.S. Bureau of Labor Statistics determined that the mean, median, 25th percentile and 75th percentile could be accurately calculated from this data. For this publication, only the mean, or average, and median wage have been included. It should be noted that to produce this average hourly wage, it was assumed that full-time employees worked a 40-hour week. Also, it was requested during wage collection, that hourly, rather than annual, wages be reported for all part-time workers.

For further information regarding this report, or the OES program methodology, please call Wendy Nelson, Occupational Employment Statistics Program Manager, at (207)287-2271.

Miscellaneous Retail SIC 59

This major group includes retail establishments not elsewhere classified. These establishments fall into the following categories: drug stores, liquor stores, used merchandise stores, nonstore retailers, fuel dealers, miscellaneous shopping goods stores, florists, tobacco stores and stands, and miscellaneous retail stores not elsewhere classified.

The annual average wage and salary employment in this industry increased by 8.9 percent from 16,690 workers in 1988 to 18,180 in 1991, but then lost 600 workers, or 3 percent, by 1994. Employment is again on the rise, growing 9.3 percent between 1991 and 1994, adding 1,630 workers and ending with a high of 19,210 employees.

The majority of the employment in this industry in 1994 was concen-

trated in four industry divisions: miscellaneous shopping goods stores, which is mainly made up of sporting goods stores, book stores, stationery stores, jewelry stores, hobby and toy shops, and sewing and piece goods stores, 30 percent; nonstore retailers, such as catalog and mail-order houses, automatic merchandising machine operators, and direct selling establishments, 28 percent (up from just 22 percent in 1991); fuel dealers, 15 percent; and drug and proprietary stores, 14 percent (down from 19 percent in 1991).

In 1994, total wages paid to employees in the miscellaneous retail industry equaled \$347.8 million. The average annual wage per worker was \$18,109. This average wage was 15.5 percent higher than the \$15,684 annual average wage for this industry's workers in 1991.
